Upgrade from Oil Heating to a Heat Pump

Access Incentives

- » Up to \$1700 per home
- » Plus additional \$150 top-up for CRD residents
- » Plus additional \$150 top-up for Saanich residents

Save Energy and Money

- » Shrink heating bills by 40% to 75%
- » Affordable heating and cooling

Better For The Environment

- » More greenhouse gas savings than not driving your car for 15 years!
- » Reduce the risk of your oil tank leaking into the soil and water bodies

About

The Oil to Heat Pump Incentive Program is funded by the Ministry of Energy and Mines' Innovative Clean Energy (ICE) Fund and is administered by City Green Solutions. In 2016, the CRD is offering 125 additional first-come, first-serve Top-Up incentives of \$150 each to CRD residents participating in the Provincial program to help them avoid costly oil spills and save energy. The District of Saanich is offering an additional \$150 incentive to Saanich residents.

What's a Heat Pump?

Heat pumps provide clean and affordable comfort year-round. Heat pumps efficiently and effectively heat your home because they only use a small amount of electricity to move a large amount of heat into your home. They also work in reverse in the summer to provide cooling by removing heat from inside your house.

Both above ground and underground oil tanks are vulnerable to leaking. This leaked oil can migrate into the soil and stormwater system which leads to our local creeks and marine shorelines.

When leaks happen, the property that is found to be the source of the oil leak is responsible to pay for the cost of environmental clean-up, both on and off the source property. Home insurance does not cover these costs.

Why Upgrade?

- A typical heat pump upgrade will save you 40-75% on your heating bills each year, and will pay for itself quickly through energy savings.
- An efficient way to greatly reduce your home's greenhouse gas emissions – better than not driving your car for 15 years!
- Gain access to even more rebates energy and water saving upgrades through the BC Hydro/ FortisBC HERO program.
- Reduce your risk of an oil spill on your property. Recent reports outline the environmental and financial risks to homeowners with aging or under-maintained home heating oil tanks.
- Spills can have serious impacts on freshwater and marine environments. It is important to report spills immediately to ensure they are mitigated as quickly as possible.
